

DISCONTINUATION NOTICE

March 13, 2019

Notification ID: CN-190302

Notification Type: Discontinuation – Suture Biological Indicators

Dear Customer,

Mesa is continually improving our solutions so that your sterility program maintains defensible data.

To preserve the quality you expect, we won't be restocking a selection of biological indicator (BI) sutures. Instead, our research and development (R&D) team is working hard on the next generation of suture products that will consistently meet stringent quality and regulatory standards.

The following products have been discontinued:

1-6100YT; *Bacillus atrophaeus*, 10⁶ population, 2 in sutures

1-6100YTHW; *Bacillus atrophaeus*, 10⁶ population, 2 in sutures – Hard Water

3-6100YT; *Geobacillus stearothermophilus*, 10⁶ population, 2 in sutures

3-6100YTC2; *Geobacillus stearothermophilus*, 10⁶ population, 2 cm sutures

Your sterility program is important to us, and we'd like to provide as many alternatives as possible. Currently, some customers have found these two products beneficial:

Woven cotton thread (1.5 mm x 19 mm)

Micro strip (1mm x 25 mm or 2 mm x 10 mm)

Spore Suspensions

If you're interested in samples of these products or in finding other alternatives, please contact our technical support team at bi-support@mesalabs.com. We are happy to assist you.

We appreciate your business and apologize for any inconvenience this may have caused you and your organization.
